Europe

[LinkedIn](#) | [GitHub](#)

Frontend Engineer with 4+ years of experience building high-reliability fintech and biometric systems. Specialized in React, TypeScript, and performance optimization of large-scale applications. Experienced in monorepo architectures, E2E testing infrastructure, and improving critical user flows used by millions of users.

EXPERIENCE

Innovatrics (Biometric), Frontend Engineer

Oct 2024 - Present

- Optimized a performance-critical identity verification flow (capture => validation => result) by **reducing** redundant GraphQL **requests** by ~**33%**, improving TanStack Query caching, and eliminating unnecessary re-renders, accelerating **data load time** from **4.1s to 3.2s** (~**21%**).
- Refactored a legacy biometric UI used across 4 production applications into a modular React component architecture within a shared monorepo, eliminating cross-module duplication and improving maintainability.
- Contributed to the development of a biometric identity verification platform that processed **83M+ successful verification requests** within the first **two months** of production.
- Collaborated with QA to redesign the Playwright E2E test architecture across three production applications in a shared monorepo, introducing shared fixtures and reusable helpers that reduced CI test runtime from **1h17m to 53m** (~**31%**) and improved test reliability and maintainability.
- Designed a shared frontend verification package used across multiple applications, standardizing domain logic and reducing duplicated implementation across teams.

Softec (Banking), Frontend / Full-Stack Developer

Jan 2023 - Oct 2024

External development team for Slovenská Sporiteľňa (one of the largest banks in Slovakia)

- Implemented complex multi-step banking form flows with strict validation and regulatory requirements, improving data consistency and reducing user input errors.
- Optimized Redux-based state management and asynchronous data flows in banking dashboards, reducing unnecessary component re-renders and improving UI update performance by ~**11%**.
- Refactored legacy React components to standardize state handling and reduce duplicated logic across multiple dashboard modules.
- Investigated and resolved production issues by tracing failures across the frontend and API layers using logs, network debugging, and error monitoring tools.

DanIT (e-shops), Frontend Developer

Jul 2021 - Dec 2022

- Built responsive UIs using HTML/CSS and React.
- Integrated frontend with Node.js / Express APIs including authentication flows.
- Implemented Stripe checkout integration with Apple Pay and Google Pay support.

HARD SKILLS

Core Technologies: React, TypeScript, JavaScript (ES6+). **Frontend ecosystem:** Next.js, CSS, Tailwind, Bootstrap.

Data & State: GraphQL, TanStack Query, Redux. **Tooling:** Vite, Webpack, Turborepo (Monorepo), Storybook.

Deployment & DevOps: GitLab CI/CD, Vercel, Render, MinIO, Kubernetes. **Testing:** Playwright, CI integration.

Backend Exposure: Node.js (Express), REST/GraphQL APIs, JWT/OAuth2, Stripe.js (Google / Apple Pay integration)

ADDITIONAL INFORMATION

Education: Faculty of electrical engineering, Slovak University of Technology in Bratislava, 2022 - 2025

Languages: English – B2, Slovak – B2, Ukrainian – Native

Certifications: ESET Cyber Security Awareness Training Certificate - ESET North America, Sep 2025
